

## Meet Dr. Jodi Tenney, DDS.

Dr. Jodi has been married to her husband, Alex Tenney, for 20 years and they have three kids together. They have been residents of the Stonebridge Ranch Community in McKinney for over 12 years. The family also has 4 dogs, two Goldendoodles and two Havanese.

Working with children has always been a passion for Dr. Jodi. She draws from her motherly experiences with her own children, to be able to provide compassionate care to her pa-

tients. In the past few years she has also gone on to take several additional courses in working with lasers to provide top notch soft tissue surgical care to her patients. Even her little newborn patients have benefitted from this "more gentle" type of service for the tongue and lip frenectomies that Dr. Jodi can now provide.

*"My Infant had a lip/tongue tie revision. They spent ample time examining and explaining options with me. I felt very comfortable with the procedure."*

## Meet Shannen Martinez, CLC.

Shannen, and her husband Lorenzo, have been happily married for several years. Together, they share two kids and a Boston terrier named Sam. In her spare time, Shannen enjoys being outside, watching movies, and spending time with her family and friends. Shannen has been in the dental industry for nearly 10 years and has played an important role in all areas of the practice.

As a nursing mother, Shannen experienced difficulty with both of her children latching. The pain and frus-

tration of dealing with mastitis, and the overall feeling of defeat, led her to explore the reasons why this affects so many nursing women. This led her to the next natural step in her career. Becoming a Certified Lactation Counselor has given her the knowledge and expertise to walk alongside mothers and infants before, during and after the frenectomy release has been performed.

Shannen finds great joy and satisfaction knowing that she is making a difference in the lives of nursing mothers and their infants.
